

Resident Directory Services

Tap2Open has added a convenient new feature to the product to enhance the guest experience. Tap2Open believes that the days of the callbox are numbered. A callbox is essentially a payphone. Since no one uses a pay phone anymore, why use a callbox?

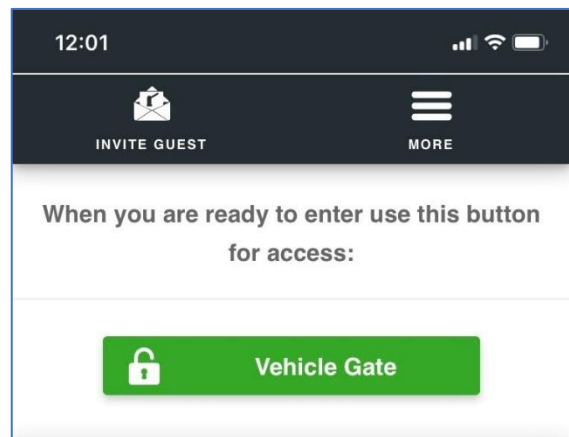

However, one useful feature of callboxes is that they usually have a resident directory. If a guest or vendor arrives, and doesn't know the resident's phone number, they can still call the resident. We have now brought the directory into the 21st century!

At the gate, the community can post a sign with a QR Code or use the NFC Features of a smartphone.

When the guest scans the sign, it will open a directory on the guest's phone (try it)! The guest can then click on a name to call the resident.

The resident can then grant access using the Tap2Open Access app.
