

Tap2Open License Plate Readers

The Ultimate in Security and Convenience

Tap2Open's License Plate Reader software captures and stores the license plate of every vehicle that enters the community, adding a higher level of security. In addition to increasing security, the system can also be used to automatically open the gates for residents and guests!

Increase Security

Tap2Open's license plate software captures the license plate of every vehicle that enters your community. This data can be used in case of any incidents at the gate to identify the vehicle involved. This data can also be searched to track down the driver in case they need to be contacted. For example, if the car is parked and needs to be moved.

Increase Convenience

The license plate software can automatically open the gate. When a resident pulls up it will recognize the license plate of the resident's car and automatically open the gate! This eliminates the need for a barcode scanner or RFID system eliminating the cost!

For incoming guests, it will record the guest's license plate to the visitors' log. This will allow a manager or guard to search for that license plate. If someone parks where they shouldn't and needs to move, you'll know who to contact to move the vehicle.

In addition, after coming in a few times, the system will also be able to open the gate automatically for returning guests (as long as their invitation is still valid).

Camera Compatibility

Tap2Open designed the product to work with a variety of license plate cameras. If you already have LPR cameras, we may be able to use the existing infrastructure. The cameras will be provided and installed by your gate company.
