Incident Log:

Introduction:

The Tap2Open Guard Interface was designed to provide security guards the functionality they need to manage guests at a gate. This guide will walk through the various features and options. With Tap2Open, most guests can open the gate(s) themselves without stopping to speak to the guard (depends on the gate configuration and community rules). However, there are many times when a guest may be confused an pulls up to the guard even with an invitation. The software allows guards to see all invitations, create invitations, lookup resident details, open the gate(s) and more.

Device Types:

The entire Tap2Open system, including the guard interface, is accessible via smartphone, computer or tablet. For PC's, there is a simple web browser interface. For smartphones and tablets, there are iOS and Android apps available. While the browser version will work on tablets and smartphones, the apps add an enhanced user experience.

With a connected tablet, the system can also be used by roaming guards while patrolling the neighborhood.

Guard Accounts:

Tap2Open typically adds an address for the clubhouse and each guard house for employee and administrator accounts. If there isn't a physical address, we make one up that approximates its location in the community. The appropriate address can then be used for the employees' accounts.

Logging In:

You should have a login & password for your account. The same credentials (username & PW) work will work for all versions.

On a computer, go to Tap2Open.com. A login button can be found in the upper RH corner of the screen. Log into the **Dashboard Login** for guard functionality.

Dashboard Login

On a tablet or smartphone, click to open the appropriate (Android or iOS) app. Use the **T2O Dashboard** app.

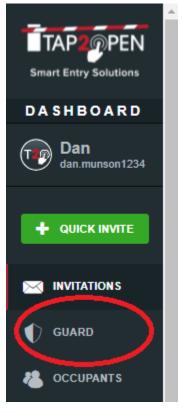

User's Guide

Accessing the Guard Interface:

On the LH side of the screen you will see the menu items for the different screens. Choose guard.

Note: Only neighborhoods that have subscribed to the guard interface will have this option. If you don't see this option, either your neighborhood doesn't subscribe, or as a user you don't have guard access.

Types of Guests – Scheduled and Unscheduled

There are two types of guests in the system:

- Scheduled These are guests where a resident has created an invitation for the user. In most communities, this means the guest can let themselves into the community using their smartphone.
- Unscheduled These guests show up unannounced to the gate. The guest may be unexpected or perhaps the resident has simply forgotten to create an invitation for the guest.

Tap2Open handles both types of visitors, but there is different functionality for each type.

Options: In some cases, the community does not allow guests to open the gates. In this case, we can turn off that functionality, and each guest must be admitted by the guard. The invitation system can still be used by residents to invite guests, and guards use the guard functionality to admit guests.

Scheduled Guests:

Most guests in Tap2Open should be scheduled. Again, in most neighborhoods, these people can open the gate themselves and go through the resident line. However, in some cases, the guest can't find their invitation or is confused, and they will go approach the guard to be let in. Guards can see every active invitation in the system. The screen looks like the screen below:

This screen shows the guests with active invitations. An *active invitation* is one where the guest has access to the neighborhood/gate at the *current time*. To allow the guest in, the guard can simply click an item in the list or the corresponding Code on the LH side of the list. That will bring up the following dialog box:

Grant Access/Open Gate:

On the screen, there is a list of the gates/doors in the neighborhood on the Tap2Open system. The guard can either click on the button on the screen or use the keyboard combination shown.

There may be too many items to show; in this case, the

guard can search for the invitation. The search bar can be used to search for a name; the name can be

the name of the guest OR the resident. The list can also be sorted by any of the columns using the up/down arrows next to the column names.

Once the proper invitation has been found, the guard can click on the item on the screen, or use the keyboard **code** shown to open the gate.

Exact or partial match Exact match is also an option. If you choose Exact match, you must spell the name correctly. If you do not choose exact match, the system will use phonetic searching to find the closest matches.

There are also 2 buttons in the dialog box: <u>Delete guest</u> and <u>edit invitation</u>. These are usually used by the guard when a resident calls and asks them to modify or delete an invitation.

Editing an Invitation:

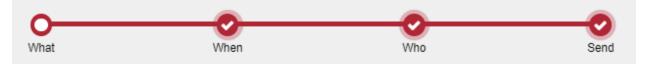

If a resident would like an invitation to be edited, do the following:

Pick the Scheduled Visitor tab.

Look up the resident or guest. Find the relevant invitation. Click on the invitation, or open it using the keyboard shortcut. In the dialog box, choose Edit Invitation:

You can now edit the invitation. Note that you do not have to go through all of the steps of creating an invitation. Simply edit the tab that's necessary by clicking on the bar at the top.

Once you are finished changing the invitation, you can simply click on another step, and the changes will be saved. You do NOT have to resend the invitation to the guest. However, you may WANT to send it to them if the details have changed.

All of the steps in creating an invitation are explained later in this document.

Deleting an Invitation:

If a resident would like an invitation to be deleted, do the following:

Pick the **Scheduled Visitor** tab.

Look up the resident or guest. Find the relevant invitation. Click on the invitation, or open it using the keyboard shortcut. In the dialog box, choose Delete Guest:

That invitation has now been deleted.

User's Guide

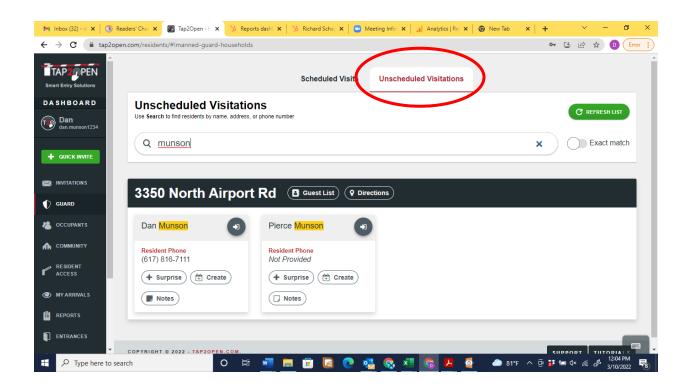

Unscheduled Visitations:

These are guests that show up unannounced to the gate. The guest may be unexpected or perhaps the resident has simply forgotten to create an invitation for the guest. With Tap2Open, guards can lookup residents and their contact info, and clear guests.

Clearing an Unscheduled Visitor:

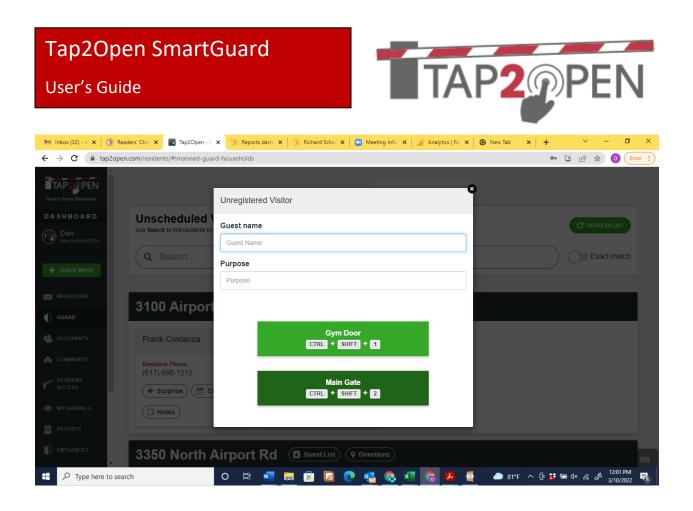

Click in the **Unscheduled Visitations** tab at the top. You will see the following screen. This is a list of all the residences and residents/users.

In the case of an unscheduled guest, typically the guard must reach out to the resident to get approval to admit the guest. *This usually starts by getting the guests name/company and the name of the resident.*

Typically, the guard will then search for the name of the resident. It is recommended that the guard search using the LAST NAME of the resident. Once the resident is found, the guard can see the resident's contact information.

After the guard has contacted the resident and gotten approval, the guard can log the visitor using the **+Surprise** button. The following dialog box will appear:

Here the guard can enter the info on the guest. At a minimum, this is usually the name of the guest, but other fields can be added. When the guard is ready to open the gate, they either click the onscreen button, or use the keyboard shortcut for that entrance. The gate opens!

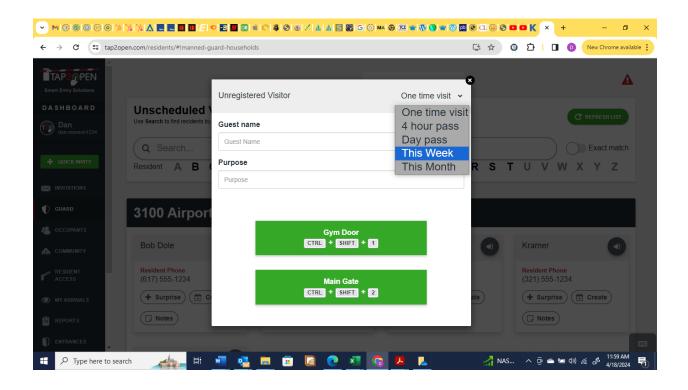

By using the buttons in the system for entrance, the entry will be logged by Tap2Open. It is not recommended to use a different clicker or button, as this will not log the entry!

- Options: Additional fields can be added to the screen so that guards collect additional data on visitors.
- Options: Tap2Open now offers a license scanner to capture the license details of guests without the guard needing to key in the information. It automatically populates the fields on the screen. Contact Tap2Open for further information.

Adding an Invitation on the Fly for an Unregistered Visitor:

When an unregistered visitor comes to the gate, there may be reasons that the visitor will be returning. There is a simple option to create an invitation on the fly for the visitor. On the screen where the guard is opening the gate, there is a pull down in the upper RH corner as shown below:

User's Guide

TAP2

This will default to one time. So if the visitor will return (like a plumber that may need to come in and out after buying supplies) it would be appropriate to change this to a day pass. You then need to send this to the visitor if they're coming back for quick entry.

User's Guide

Simply go back to Scheduled Visits tab on the Guard Screen and find the invitation on the list. Click on it. It will show the dialog screen to allow entry. Click on the invitation.

G BACK			NEXT 🔊

User's Guide

You can pick a **Start Date** and **End Date**. Under **Visit Time**, all day provides 24 hour access on the day(s) shown. Under **Daily Schedule** you can grant access for a specific time period for the days shown. If you pick **Start/End** the beginning and end of the time period are set for the period shown (see below):

Starting		Ending		Actions
March 10th 2022 1	2:00am	April 11th 2022	12:00am	DELETE
When may gu	iests arrive?			
Start Date	Mar 25, 2022			
End Date	May 18, 2022			
Visit Time	ALL DAY D	AILY SCHEDULE STARTIEND		
	Start at 8:08 AM	on March 25th 2022.		
	End at 11:59 PM	on May 18th 2022.		
Visit Day(s)	EVERYDAY 8PE	CIFIC DAY(8)		

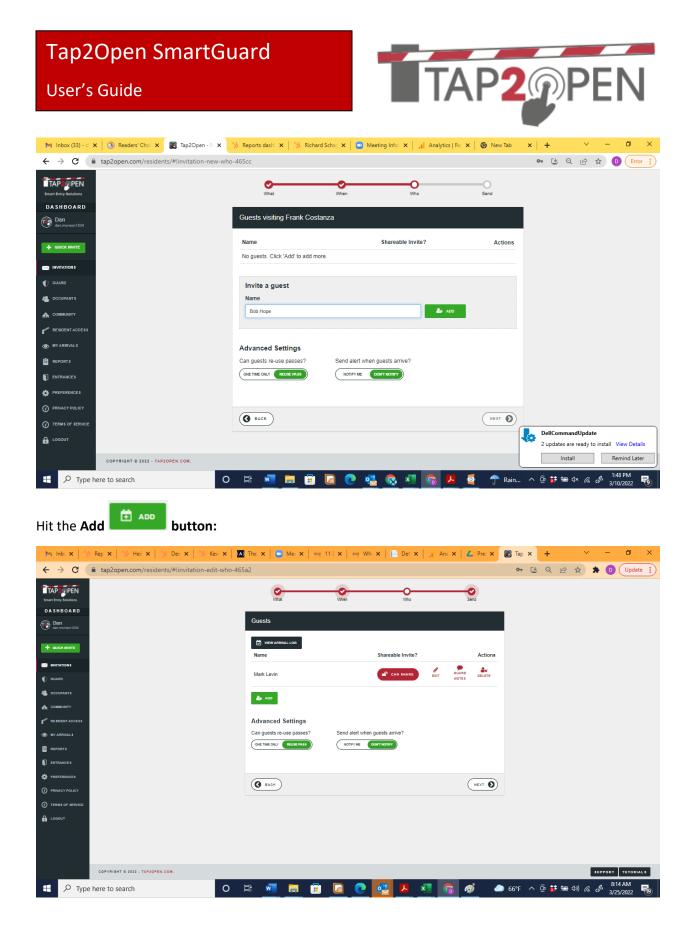

Under Visit Day(s), you can choose which days of the week the user can access the property.

Then hit **ADD** to add the time period for access. You can add more than one time period by hitting ADD again!

Next, Invite a guest:

Press the Next **D** button. Enter the guests name, or choose from the address book.

CAN SHARE

You will now see the that a **Can Share** button comes up. If this says "Can Share", that means the user can forward on the invitation to others. If the invitation says "No Sharing" that means the invite is locked to the device and cannot be shared.

Options: The neighborhood can specifiy whether invitations can be shared. This can be set in Tap2Open. Please have the system adminstrator contact us to change this.

Advanced Settings

Under **Advanced Settings**, you see the invitation can be made one time, or reuse pass. In addition, the resident can be notified when a guest arrives via email or text. By default this is by email. Click on either side of the button. The green side is the active side. **Hit Next**.

Send the invite:

On this screen, you are telling the system how to send the invitation to the guest.

The Choose button, allows the user to set preferences fo this guest. If they use the default, it will set default information on the sender. In general leave this as default.

User's Guide

button.

You will then see the guests name. Beside it it MAY say PIN with a create pin

Click on this to create a PIN for the user. This only applies if the neighborhood uses Tap2Open keypads. This generally doesn't apply to entrances with guards. However, it may apply if there are other gates or doors using Tap2Open away from the guards.

In Tap2Open, the PIN is unique and specific to the invitation. The PIN follows the same access rules as the invitation, and will automatically expire when it is no longer valid.

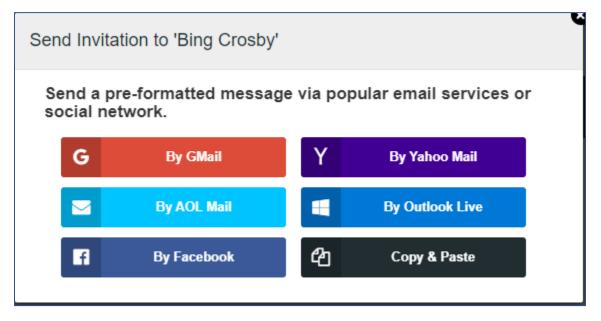

Option: PINs can be given to guests with Tap2Open keypads.

Note: If you hit **FINISH** without sending the invitation, it is still a valid invitation. This could be used in a case where PINs are being used or if the guard clears the guest.

Then hit the Send Invitation

SEND INVITATION button.

The screens may look slightly different using a tablet, phone or computer. This is the computer view:

Click on the method you would like to use to send the invite. On smartphones & tablets, using the Tap2Open app, there is a text message button that doesn't appear here.

Choose the method you would like to use. It will queue up the message for you, then hit Send.

If you don't see the app or method you would like to use, choose **Copy & Paste**. It will create an invitation link for you that can be pasted into any app or document. Simply hit copy and then paste into the other app or document.

The actual invitation looks something like this:

To visit Dan click this link before leaving: https://tap2open.com/v?sGdFuASaY3isILNLVE0LDqUuVZHH3nh4

There are short and long versions, and simply the URL to click. Use the one which is most appropriate.

User's Guide

Adding Notes about Residents:

There is also a option to add notes

R Notes

about a resident	•
------------------	---

Notes for Dan Munson						
Notes						
Likes packages left in his gatehouse.						

Incident Log:

A incident log has been incorporated into Tap2Open. This allows guards to document incidents for later

review by staff. On the main guard screen, there is a small triangle icon in the Upper RH corner. Click on that icon. This will bring up a dialog box to document the incident. These entries can be reviewed later by management with community manager privileges.
