

Virtual Call Box

Allow guests to call residents without a physical callbox

We know how important it is to provide seamless access for everyone, from delivery drivers and surprise visitors to residents and guests who may not have smartphones. This innovative feature is designed to address those very needs, offering a modern, low-cost alternative to traditional call-box systems.

Our invitation system, where guests can let themselves in with just a smartphone is still the best visitor solution today. But for an unexpected visitor that may not have the resident's phone number, we now offer our **Virtual Call Box**. With our Virtual Call Box, visitors simply call a telephone number prominently displayed on a sign at the gate (see example). Visitors with a smartphone but no invitation can scan a QR code for even quicker calling. The guest can then dial-by-name to effortlessly connect with a resident who can then grant access – just like with a physical call box.

Need Access?

CALL (XXX) XXX-XXXX

IF YOU DO NOT HAVE AN INVITATION

Call the number and follow the prompts to enter the resident's last name by digit.

(e.g. for *Deluca* press 335822)

Here are some of the fantastic benefits your community can enjoy with the Virtual Call Box:

- **Accessibility for All:** Visitors and residents only need a basic flip phone to use the system—no smartphone required.
- **More Convenient than a Callbox:** *Does anyone really want to use a callbox? Just use your phone*
- **Continuous Communication:** Conversations can continue even after guests have passed through the gate, perfect for providing driving directions or further assistance once inside the community.
- **Works with Multiple Gates:** A unique phone number can be placed at each entrance. This way the guest will be granted access to the gate they are calling from
- **Combined Visitor Log:** The system automatically logs the calling party's phone number, caller ID (if available), and vehicle license plate (with compatible ALPR cameras).
- **Resident Control:** Residents can easily opt in or out of the system from the Tap2Open Dashboard. They can even set their own "do not disturb" schedules if they desire.
- **Weather Protection:** No more rolling down windows in bad weather or the heat. Visitors can call from the comfort of their vehicle.
- **Fully integrated:** Uses Tap2Open accounts. No separate database or management needed. Residents can also send invitations to guests for entry.
- **Vandal-proof:** With no physical hardware at the gate, there's nothing to be damaged, accidentally or on purpose.
